

Economical web based Electronic Health Record (EHR) solution for ICU

Dr. Roshana Mallawaarachchi

Registrar in Anaesthesiology, Teaching Hospital Kandy

Email: roshana@mallawaarachchi.com

What is an electronic health record (EHR)?

EHR is a digital version of a patient's health-related information.

EHRs are real-time, patient-centered records that make information available instantly and securely to authorized users.

Access your patient data from anywhere.

What information does an EHR contain?

- ❑ Administrative and billing data
- ❑ Patient demographics
- ❑ Medical histories
- ❑ Vital signs
- ❑ Diagnoses
- ❑ Medications
- ❑ Progress notes
- ❑ Immunization dates
- ❑ Allergies
- ❑ Radiology images
- ❑ Lab and test results

Advantages of EHRs

- ❑ Accurate, up-to-date, and complete information
- ❑ Quick access to patient records
- ❑ Securely sharing information
- ❑ Reduce medical errors
- ❑ Improving patient and provider interaction and communication
- ❑ Latest information about a drug

Advantages of EHRs

- Alerts for drug interactions
- More reliable prescribing
- Accurate coding and billing
- Enhancing privacy and security
- Improve productivity
- Reducing costs

Benefits of Electronic Health Records

79% More efficient

82% Saves time

75% Receive lab results faster

70% Enhances in data confidentiality

* Jamoom, E., Patel, V., King, J., & Furukawa, M. (2012, August). National perceptions of EHR adoption: Barriers, impacts, and federal policies. National conference on health statistics.

Potential disadvantages of EHRs

- ❑ Privacy Protection
- ❑ Delays in documentation
- ❑ Continuous need for updates
- ❑ e-Messaging between providers
- ❑ Legal issues
- ❑ Cost of set-up and maintenance

Components of EHR Implementation

- Hardware
- EHR Software
- Implementation Assistance
- Training
- Ongoing Network Fees and Maintenance

Average cost: Michigan Center for Effective IT Adoption

Cost	In-Office			Web-based		
	Upfront Cost	Yearly Cost	5 Year	Upfront Cost	Yearly Cost	5 Year
Estimated Average Cost	\$33,000	\$4,000	\$48,000	\$26,000	\$8,000	\$58,000

Can we afford it?

Drug Information

Estimated Cost for EHR Software

- ❑ **Domain Registration** : USD 20 per year
- ❑ **Linux Hosting** : USD 50 per year
- ❑ **Software** : Free (Open Source)

❑ **Total:**

USD 70 per year

So this **modified open source (Free)** software is reducing the high up-front financial costs of implementing EHRs.

thank you!
